

DimensionsPro MVP Manifesto

Target MVP Date: August 5, 2026

08 / 05 / 2026

I am building DimensionsPro into a contractor-first measuring, estimating, and closing tool that helps window and door contractors measure accurately, quote confidently, and close jobs during the first customer meeting.

My exact goal is to create a beautiful phone/web-based application that lets a contractor capture window and door photos, use a credit card or known-size marker for scale, generate verified dimensions, select product options, calculate an estimate, and produce a clear scope of work before leaving the job site.

I understand there is no something for nothing. In exchange for this goal, I will give consistent time, focused attention, field feedback, real contractor knowledge, and the patience to build this step by step.

By August 5, 2026, DimensionsPro will have a working TEST web app where a contractor can create a project, capture or upload window and door photos, use a credit card or 1-inch marker for scale, receive suggested measurements, manually verify or correct those measurements, select basic product options, and generate a simple quote-ready report.

Immediate Plan

1. Make the testing branch and TEST web app stable.
2. Make sure saved projects reliably load from Supabase.
3. Make DimensionSnap work with a credit card or scale marker in the photo.
4. Require every AI measurement to be reviewed and confirmed by the contractor.
5. Add product selections, pricing rules, labor, material costs, and markup.
6. Generate a professional estimate and scope of work that can help close the customer on-site.

I will begin at once, test in the real world, learn from each version, and improve the app until it becomes a practical tool contractors can trust.

I measure clearly. I quote confidently. I close on-site.
